## 12. OTHER ALTERNATIVE FRAMEWORKS

# Framework?

- A free collection of tools for creating enterprise class applications quickly with predefined and tested resources.
- HTML and CSS design templates are mostly provided for typography, forms, buttons, navigation and interface components

# Why Frameworks?

- Fun to use
- Make it quicker to build an MVP
- Work around lumps/bugs in the platform
- Knowing a framework means i get paid.

# USER NEEDS

- Sites and apps should load quickly
- Smooth interactions and responsive gesture
- HCI
- Better performance on any mobile device
- Compatible with any resolution and screen
- Feature rich
- Ergonomic design

# DEVELOPER COSTS

- Time to learn a framework
- Bandwidth
- CPU usage(battery)
- Frame rate
- Memory usage

<http://www.chromium.org/developers/how-tos/trace-event-profiling-tool>

- Ionic IO
- Ratchet
- Ruboto

# Cross Platform Architecture

# Why use a framework?

## Advantages

- Rapid prototyping
- Streamline your design process
- Save development time because tested
- Scale your design on all devices
- Secure/cost/Support/Efficiency

## Disadvantages

- Code bloat by customization
- Know your code
- Updating can break up things
- Collaborations in teams

# Bootstrap

Bootstrap specifies four pixel-based media query breakpoints.

| Screens             | Viewport Size | Container Width | Class Prefix           |
|---------------------|---------------|-----------------|------------------------|
| Extra small screens | < 768px       | auto            | <code>.col-xs-*</code> |
| Small screens       | ≥ 768px       | 750px           | <code>.col-sm-*</code> |
| Medium screens      | ≥ 992px       | 970px           | <code>.col-md-*</code> |
| Large screens       | ≥ 1200px      | 1170px          | <code>.col-lg-*</code> |

# Foundation 5

Foundation includes five em-based media queries.

| Screens         | Viewport Size                    | Class Prefix (Default Grid)       | Class Prefix (Block Grid)         |
|-----------------|----------------------------------|-----------------------------------|-----------------------------------|
| Small screens   | $\leq 40\text{em}$ (640px)       | <code>.small-* .column(s)</code>  | <code>.small-block-grid-*</code>  |
| Medium screens  | $\geq 40.063\text{em}$ (641px)   | <code>.medium-* .column(s)</code> | <code>.medium-block-grid-*</code> |
| Large screens   | $\geq 64.063\text{em}$ (1025px)  | <code>.large-* .column(s)</code>  | <code>.large-block-grid-*</code>  |
| XXLarge screens | $\geq 90.063\text{em}$ (1441px)  | Not Activated                     | Not Activated                     |
| XXLarge screens | $\geq 120.063\text{em}$ (1921px) | Not Activated                     | Not Activated                     |

- [Foundation.zurb.com/docs](http://Foundation.zurb.com/docs)
- [Mixture.io](http://Mixture.io)

# Yeoman.io

- Web scaffolding tool for modern web apps
- Modern workflows for modern apps
- Three key components
  - Yo
  - Bower
  - Grunt
- Generators are available for Angular, Backbone, React, Polymer

# Yeoman.io

- Scaffolding tool
- Similar Rails Generators
- Scaffolds project structure, defaults and Grunt file
- Existing generators for
  - AngularJS, ChromeApp, Flask, Silex, Sinatra, Frefox OS

# Yo:Generators

- Node Modules
- Available via NPM ( node package manager)
- Npm search yeoman-generator
- Rolling your own
- <http://yeoman.io/generators.html#writing-your-first-generator>

# BOWER

- Package manager for the web
- Created at twitter
- Runs over GIT
- No System wide dependencies
- No cross project dependencies
- Flattens dependency tree

# Bower:Dependencies

- Dependencies are documents in bower.json
- Bower CLI tool allows:
  - Searching for dependencies
  - Installing dependencies
  - Registering packages
- Packages available for
  - jQuery, D3, Three.js, Backbone.js, Modernizr, AngularJS

# Grunt

- Javascript built tool
- Automation of repetitive development tasks
- Allows developers to test, preview and build project
- Plugins used to mix and match per project
- Configurable tasks

# Grunt:Plugins

- Node Module
- JavaScript/CoffeeScript
- Creating a plugin
  - <http://gruntjs.com/creating-plugins>
- Plugins available for
  - HTMLmin, Mocha, PHPUnit, RECESS, SCSS/LESS

# Yeoman.io

- Installing Yo, Grunt and Bower
  - Npm install -g yo grunt-cli bower
- Installing a generator
  - Npm install -g generator-backbone generator-mocha

# Creating a project

- Creating a new empty project folder
- `Mkdir -p ~/projects/backbone &&  
cd~/projects/backbone`
- Scaffolding the project
- `Yo backbone`

# Building App

- Create Model
  - Yo backbone:model url
- Create a collection
  - Yo backbone:collection url
- Create a view
  - Yo backbone:view url
- Create a router
  - Yo backbone:router url

# Adding a dependency

- Finding a dependency
  - Bower search backbone.localStorage
- Installing a dependency
  - Bower install backbone.localStorage

# Testing

- Mocha + Expect
- Running the tests:
  - Grunt test
- Preview + Building
  - Previewing
    - Grunt server
  - Building
    - Grunt build

# Ionic framework

- Free and open source, ionic offers a library of mobile-optimized HTML, CSS and JS components, gestures and tools for building highly interactive apps. Built with Sass and optimized for AngularJS
- Enables any developer with knowledge of HTML, CSS and JS to build mobile hybrid applications in no time.

# IONIC FRAMEWORK

- Combines Apache Cordova with Angular JS
- Create enterprise class Applications/Hybrid mobile application
- Supported devices
  - IOS6+
  - Android 4+
  - Windows Phone 8+
  - Firefox OS

| Design     | Functional |
|------------|------------|
| Custom DOM | AngularJS  |
| Custom CSS |            |
| Custom JS  |            |

|       | Android | iOS | WP |
|-------|---------|-----|----|
| Ionic |         | 7   |    |

# IONIC FRAMEWORK

- Founded in 2012 by Ben Sperry(CEO) and Max Lynch (CTO)
- Creators of Codiqa, JetStrap and Ionic
- Ionic is built on top of cordova , wraps many of its commands
- Commands like build, platform, plugin all directly call cordova
- <http://ionicons.com>

# IONIC LAB WEB

- Build and test iOS and Android versions side-by-side. See changes instantly
  - `ionic serve --lab`
- Liveload
  - Instantly update your apps with code changes, even when running directly on your device
    - `ionic run --livereload`
- ICON/SPLASH generation
  - Generate icons and splash screens for all devices and device sizes with a single command
- Share your ionic apps with clients, customers and testers all around the world. All without ever going through the APP Store!

# IONIC.IO Platform

- Full-stack backend services and tools for your Ionic app
  - Finally a service that embraces mobile web dev!
    - Push
    - Analytics
    - Deploy
    - Users
    - Creator
    - Lab
    - Market

# Chocolate Chip UI

## Advantages

- Cross platform
  - Android –IOS-WP
- Event Optimization depending on the OS
- Documentation
- ChocolateChipJS
- Easy
- Good Performance

## Disadvantages

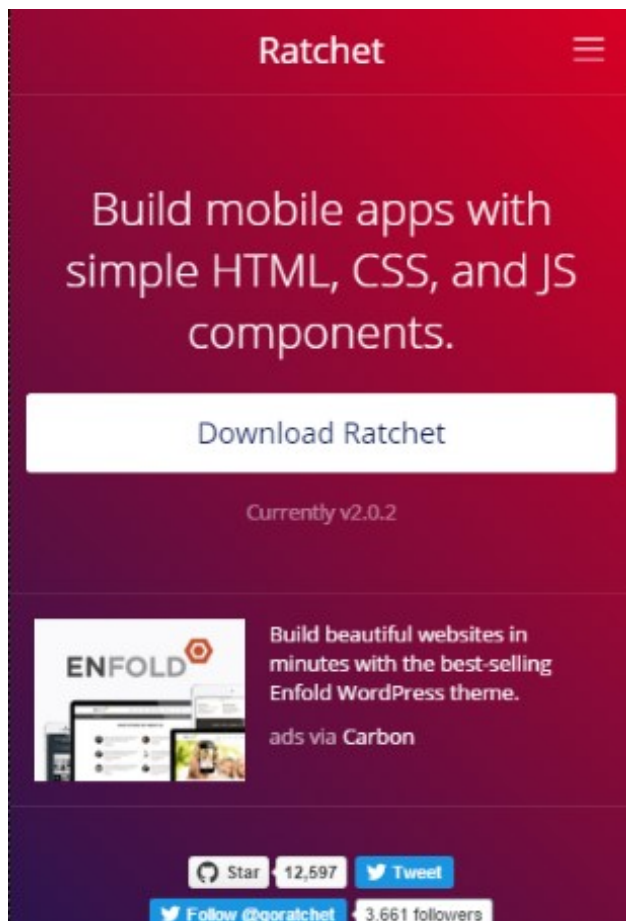

- Old User Interface
- JQuery: Easy but not the best

|         | Android | iOS | WP |
|---------|---------|-----|----|
| Ratchet | 4       | 7   |    |

# Ratchet

| Design     | Functional |
|------------|------------|
| HTML5 DOM  | Slider.js  |
| Custom CSS | Push.js    |
|            |            |
|            | jQuery     |

## Goratchet.com

- Build mobile apps with simple HTML, CSS and JS Components
- Advantages
  - Very Easy
- Disadvantages
  - Low user interface
  - Only CSS(UI)
  - Only iOS

|    | Android | iOS | WP |
|----|---------|-----|----|
| F7 |         | 7   |    |

# Framework 7

| Design     | Functional |
|------------|------------|
| Custom DOM | DOM \$\$   |
| Custom CSS | jQuery     |

- Advantages
  - Good performance
  - Easy and Good Documentation
- Disadvantages
  - DOM – easy but not the best approach
  - Only iOS
- Framework 7 is a free and open source mobile HTML framework to develop hybrid mobile apps or web apps with iOS native look and feel

# Angular Material

| Design     | Functional |
|------------|------------|
| Custom DOM | AngularJS  |
| Custom CSS |            |
| Custom JS  |            |

- An implementation of material design in Angular.js
- A set of reusable, well-tested and accessible UI components based on the Material Design System
- Advantages
  - High Functions (AngularJS)
  - Documentation
  - Good Performance
- Disadvantage
  - AngularJS not easy
  - Only Material Design

|    | Android  | iOS | WP |
|----|----------|-----|----|
| AM | Material |     |    |

|        | Android | iOS | WP |
|--------|---------|-----|----|
| Ruboto | 4       |     |    |

# Ruboto

- A framework and tool chain to develop native android apps, using the ruby language we all know and love
- Advantages
  - Ruby based
- Disadvantages
  - Android+Ruby =Android
  - Old User Interface
  - Only Android

| Design  | Functional |
|---------|------------|
| Android | Ruby/JRuby |
|         | Android    |
|         | APIs       |

# Framework Analysis

| Framework Name   | Jquery | AngularJS | DOM | OWN JS | Open /Commercial |
|------------------|--------|-----------|-----|--------|------------------|
| Angular Material |        | X         |     |        |                  |
| Bootstrap        |        |           |     |        |                  |
| IONIC.IO         |        | X         |     |        |                  |
| ChocolateChip UI | X      |           |     | X      |                  |
| Kendo UI         |        |           |     |        |                  |
| Yeoman.io        |        |           |     |        |                  |
| ratchet          |        |           |     |        |                  |
| ruboto           |        |           |     |        |                  |
| Zurb foundation  |        |           |     |        |                  |
| Onesen UI        |        |           |     |        |                  |
| Framework 7      |        |           | X   |        |                  |

## MOBILE PLATFORMS

# Framework Analysis

| Framework Name   | Android  | iOS | Windows Phone | Web |  |
|------------------|----------|-----|---------------|-----|--|
| Angular Material | Material |     |               |     |  |
| Bootstrap        | 4        | 4   |               | Y   |  |
| IONIC.IO         |          |     |               |     |  |
| ChocolateChip UI | 4        | 7   | 8             |     |  |
| Kendo UI         |          |     |               |     |  |
| Yeoman.io        |          |     |               |     |  |
| ratchet          | 4        | 7   |               |     |  |
| ruboto           |          |     |               |     |  |
| Zurb foundation  |          |     |               |     |  |
| Onesen UI        |          |     |               |     |  |
| Framework 7      |          | 7   |               |     |  |
